

Low Voltage Switchgear, Controlgear and their Assemblies

Following the recent recruitment of a new Secretary, ETCI TC4 has resumed its work as the Irish National Committee responsible for standards development in the area of Low Voltage Switchgear, Controlgear and their Assemblies.

The Committee mirrors and participates in the work of IEC Technical Committee 121 and its two Subcommittees, SC121A and SC121B. ETCI TC4 provides the focal point for Ireland's contribution to the development of international standards such as IEC 60947 and IEC 61439. Many standards falling under the scope of ETCI TC4 have been published as European Standards and have in turn been adopted as Irish Standards.

Participation in TC4 affords members unique access to emerging international and European standards and the opportunity to influence the direction these standards will take.

TC4 is currently recruiting new members to actively participate and to bring the committee up to strength once again.

For further information on the TC4 work programme for 2015, please contact the Secretary, Mr. Mark Keogh.
